CMWAP · What was taught

CERTIFIED WEB APP PENTESTER · MASTER LEVEL

HOW IT WAS EXAMINED

A practical hacking exam on a live web application, with a full pentest report graded by the examiner. The certification was awarded at three levels: Basic (24-hour exam), Advanced and Master (48-hour exam), based on the findings and the quality of the report. This holder achieved Master, the highest level.

00 · Introduction & exam strategy

- How the 24/48-hour exam and the three levels work
- Time budgeting and note-taking

01 · Recon & mapping

- Application mapping
- Content discovery and attack-surface notes

02 · Broken access control

- IDOR, BAC and privilege boundaries
- The access-control matrix

03–04 · Cross-site scripting & blind XSS

- Reflected, stored and DOM XSS
- Blind XSS with out-of-band payloads

05 · CSRF

- Token, origin and SameSite failures
- Proof-of-concept pages

06 · SSRF

- Internal reach and metadata endpoints
- Safe validation

07 · JWT & authentication

- JWT attacks
- Session and auth-flow weaknesses

08 · Hidden credentials

- Secrets in source, JS and config
- The secret funnel

09 · Business logic

- Finding logic gaps
- Abuse of intended flows

10 · Vulnerability chaining

- Combining low findings into high impact

CONTINUED

11 · Automation & tooling

- Scripting repeatable checks
- Tooling that respects scope

12 · Reporting

- Finding structure, evidence, severity
- Writing the graded pentest report

13 · Exam prep & mock exam

- Mock exam on a practice target
- Reviewing your own report
